THE GENESIS OF ALL WE CAN SAVE

The print and digital editions of *All We Can Save* were born from a crucial realization: the climate movement has historically been dominated by male voices, while women—particularly women of color and Indigenous women—have been doing some of the most innovative and effective work on the ground. Editors Ayana Elizabeth Johnson, a marine biologist and policy expert, and Katharine K. Wilkinson, a writer and climate communication strategist, curated this anthology to amplify those voices.

Published in 2020, the collection quickly became a *New York Times* bestseller. The **All We Can Save ebook** version allows even more people to engage with its content across devices, whether reading on a phone during a commute or on a tablet at home. The ebook preserves the full richness of the original print edition, including the evocative cover art and the seamless flow of the essays.

Why an Ebook Matters for Climate

Literature

Digital publishing offers distinct advantages for a book like *All We Can Save*. First, ebooks reduce paper consumption and shipping emissions—a small but meaningful alignment with the book’s environmental message. Second, the **All We Can Save ebook** can be updated with new resources, discussion guides, and links to action networks, keeping the content dynamic. Third, the format enables readers to search for specific terms (e.g., “intersectionality,” “renewable energy,” “community resilience”) quickly, making it an excellent research tool for students and activists.

Moreover, ebooks can be more affordable and accessible to a global audience, especially in regions where shipping physical books is costly or slow. The **All We Can Save ebook** thus becomes a vehicle for democratizing climate knowledge.

INSIDE THE ANTHOLOGY: THEMES AND STRUCTURE

The book is organized into four parts: **Root**, **Grow**, **Harvest**, and **Nourish**. This structure mirrors the natural cycle of planting, cultivating, gathering, and sustaining—a metaphor for how we must approach climate work. Each section contains essays, poems, or art from a diverse array of contributors.

Key Themes Explored

- **Truth and Grief:** Many contributors confront the emotional weight of ecological loss. Essays like “We Are the Great Turning” by Lois P. Jones and “Calling In” by Kendra Pierre-Louis acknowledge despair while refusing to let it paralyze us.
- **Climate Justice:** The anthology consistently centers equity. Authors such as Colette Pichon Battle and Mustafa Santiago Ali highlight how climate change disproportionately affects Black, Indigenous, and low-income communities, and why solutions must address systemic injustice.
- **Collective Action:** The book emphasizes that individual lifestyle changes are insufficient; we need systemic shifts. Pieces by Dr. Ayana Elizabeth Johnson and Xiye Bastida call for voting, organizing, and building movements.
- **Imagination and Creativity:** Poets like Joy Harjo and activists like adrienne maree brown remind us that storytelling and art are essential to envisioning a just future.
- **Resilience and Hope:** While the science is sobering, the tone of the book is not defeatist. Contributors like Dr. Katharine Hayhoe and Leah Penniman offer pragmatic strategies for adaptation and regeneration.
