

Do One Thing Everyday That Scares You

Do One Thing Everyday That Scares You

Downloaded from [app.ardentx.com](#) by Josie & Grant

WHY STEPPING INTO DISCOMFORT TRANSFORMS YOUR LIFE

We have all heard the famous quote often attributed to Eleanor Roosevelt: "**Do one thing every day that scares you.**" At first glance, it sounds like a call to reckless adrenaline seeking. But dig deeper, and you will find it is a blueprint for personal growth, resilience, and unlocking your full potential. This simple yet profound challenge urges you to step outside your comfort zone regularly. It is not about doing something terrifying; it is about doing something that makes you feel a little uneasy—a small, deliberate act of courage that expands your boundaries. In this comprehensive article, we will explore why embracing this mindset is crucial for success, how to apply it in daily life, and the transformative effects it can have on your career, relationships, and inner self.

The Psychology Behind Fear and Growth

Fear is a natural survival mechanism. It keeps us safe from immediate danger. However, in modern life, many of our fears are not life-threatening—they are psychological barriers. Fear of rejection, fear of failure, fear of the unknown—these hold us back from pursuing opportunities. When you deliberately **do one thing every day that scares you**, you train your brain to associate discomfort with growth rather than danger. This is known as habituation: repeated exposure to a feared stimulus reduces the fear response over time. Psychologists call this *exposure therapy*. By consistently facing small fears, you build resilience and reduce anxiety in the face of larger challenges.

How to Identify Your Daily "Scary" Thing

Not everyone needs to skydive or give a speech to a thousand people. Your daily scary action should be personal and relevant to your life. Start by reflecting on areas where you feel stuck, shy, or avoidant. Ask yourself: *What small action would make me feel uncomfortable but is completely safe?* Here are some categories to inspire you:

- **Social courage:** Start a conversation with a stranger, ask a question in a meeting, or compliment someone you admire.
- **Creative courage:** Write a poem, share a personal story online, or paint something and show it to a friend.
- **Professional courage:** Apply for a job you feel underqualified for, pitch an idea, or ask for a raise.
- **Physical courage:** Try a new workout, take a cold shower, or go for a run in a new neighborhood.
- **Emotional courage:** Apologize first, say "I love you" when it feels vulnerable, or admit you don't know something.

The key is to choose actions that are challenging but not overwhelming. If you are terrified of public speaking, your first step might be recording a short video for yourself, not delivering a keynote. Over time, you can increase the difficulty.

Building the Habit into Your Routine

Consistency is more important than intensity. To truly benefit, you need to **do one thing everyday that scares you** as a non-negotiable habit. Here is a practical step-by-step approach:

1. **Set a daily reminder:** Use a phone alarm or calendar notification with the phrase "Scary Thing Time."
2. **Keep it small:** Aim for actions that take less than 10 minutes. This lowers the resistance to start.
3. **Track it:** Maintain a journal or digital log. Write down the action, how you felt before, during, and after.
4. **Find an accountability partner:** Share your commitment with a friend who will check in daily.
5. **Celebrate each win:** Acknowledge your courage, no matter how small. Reward yourself with a treat or a moment of pride.

The goal is to rewire your brain's default response to fear. Instead of avoidance, you will learn to lean into discomfort. This habit builds what psychologists call a "growth mindset," where challenges become opportunities for development.

Tangible Benefits You Will Experience

When you practice this daily, remarkable changes begin to unfold. Not only does your confidence soar, but you also develop skills that are invaluable in every area of life. Here are some of the most impactful benefits:

1. EXPANDED COMFORT ZONE

Each time you do something scary, your comfort zone expands. What once felt terrifying becomes normal. This directly applies to career advancement, social connections, and personal adventures. You will find yourself volunteering for projects, speaking up in groups, and trying new experiences without hesitation.

2. REDUCED ANXIETY OVER TIME

Anxiety thrives on avoidance. By confronting small fears daily, you teach your nervous system that uncertainty is survivable. Many people who adopt this practice report a decrease in overall anxiety levels, even in unrelated situations.

3. INCREASED RESILIENCE AND ADAPTABILITY

Life is unpredictable. The ability to handle uncertainty with grace is a superpower. Regular exposure to manageable fear builds emotional muscle. When big crises hit, you will cope better because you are used to being uncomfortable.

4. ENHANCED SELF-ESTEEM AND CONFIDENCE

There is nothing more empowering than proving to yourself that you can do hard things. Each small victory reinforces the belief, "I am capable." This self-trust radiates into every aspect of your life.

5. BETTER DECISION-MAKING

Fear often clouds judgment. When you practice facing fear, you learn to think clearly under pressure. You become better at taking calculated risks in business, relationships, and personal projects.

Real-Life Examples of the "Scary Thing" Principle

To illustrate how this works in practice, consider these scenarios:

- **Sarah, a software engineer**, dreaded networking events. She committed to attending one per week and starting one conversation. Within a month, she met a mentor who helped her land a senior role.
- **Tom, a shy student**, decided to raise his hand in class once per day, even if he was unsure. He gradually became more articulate and confident, eventually leading group projects.
- **Maria, a freelance writer**, feared pitching to big clients. She set a goal to send one pitch daily. After several rejections, she landed a high-paying contract that transformed her income.

These examples show that the compound effect of daily courage is powerful. The magic lies not in the specific action but in the act of consistently doing something that stretches you.

Overcoming Common Obstacles to Daily Courage

Even with good intentions, you will face resistance. Here are common hurdles and how to overcome them:

Obstacle 1: "I don't have anything scary to do today."

Solution: Look deeper. Is there a phone call you have been putting off? A messy conversation you are avoiding? A creative project that intimidates you? There is always something. If truly nothing comes, choose a random act of courage, like doing something you are embarrassed about (e.g., singing aloud in public, wearing something bold).

Obstacle 2: "I did it yesterday, but today I'm too tired."

Solution: Lower the bar further. Your scary thing can be as simple as saying "no" to a request, sitting in silence for one minute, or eating a food you dislike. The point is to keep the habit alive, not to perform heroic feats.

Obstacle 3: "I'm afraid of embarrassment or judgment."

Solution: Remind yourself that most people are too focused on themselves to notice you. And even if they do, their opinions rarely matter. The growth you gain far outweighs the temporary discomfort of potential mockery.

Obstacle 4: "I tried and it felt too uncomfortable."

Solution: Discomfort is part of the process. Sit with it. Observe it. Use breathing techniques to calm yourself. Afterward, reflect on how it felt and what you learned. Over time, the same action will feel easier.

How This Practice Deepens Relationships

One often overlooked benefit is how daily courage improves your connections with others. By doing things that scare you, you become more vulnerable and authentic—two key ingredients for intimacy. For example, initiating a difficult conversation with a partner, admitting a mistake, or expressing appreciation can strengthen bonds. When you **do one thing everyday that scares you** in your relationships, you break down walls and create deeper trust. You also attract like-minded people who value growth and honesty.

Applying the Principle in the Workplace

Career advancement is strongly tied to risk-taking. Yet many professionals stay in their comfort zones, watching others pass them by. Imagine what would happen if you applied this principle at work:

- Speak up in every meeting, even if only to agree with someone.
- Volunteer for a project that stretches your skills.
- Ask for feedback from a senior colleague.
- Suggest an improvement to a process, even if it might be rejected.

These actions may feel awkward at first, but they signal confidence and initiative. Over time, you become known as a go-getter, opening doors to promotions and leadership roles.

Scientific Backing for Daily Fear-Facing

Research in neuroscience supports this approach. The brain's amygdala, which processes fear, can be rewired through repeated exposure. A study from the University of California found that individuals who regularly faced their fears showed decreased amygdala activity and increased prefrontal cortex activity, meaning they were better able to regulate fear. Moreover, building courage triggers the release of dopamine after each small win, creating a positive feedback loop that motivates you to continue. This is why the habit can become addictive—in a good way.

Start Today: Your First Scary Step

The best time to begin is now. Do not wait for a Monday or a new year. Decide on one small action you can take today that makes you slightly nervous. Maybe it is writing a comment on a public forum, calling a friend you lost touch with, or putting on that outfit you never wear. Commit to it within the next hour. Then reflect on the experience. Tomorrow, choose another. After a week, you will notice a shift in your mindset. After a month, you will have taken 30 steps further than you were before.

Conclusion

The challenge to **do one thing everyday that scares you** is not about recklessness—it is about intentional growth. It is a powerful antidote to a life lived in autopilot, ruled by fear of change. By consistently stepping into discomfort, you build resilience, confidence, and a richer experience of life. You discover that fear is a compass pointing toward your potential. The path may be uncomfortable, but it is the only way to become the person you are meant to be. So take a deep breath and do that scary thing. Your future self will thank you.
